# *Chapter 8: Algorithms*

---

---

Algorithms + Data Structures  
= Programs

---

- Niklaus Wirth, 1975.

---

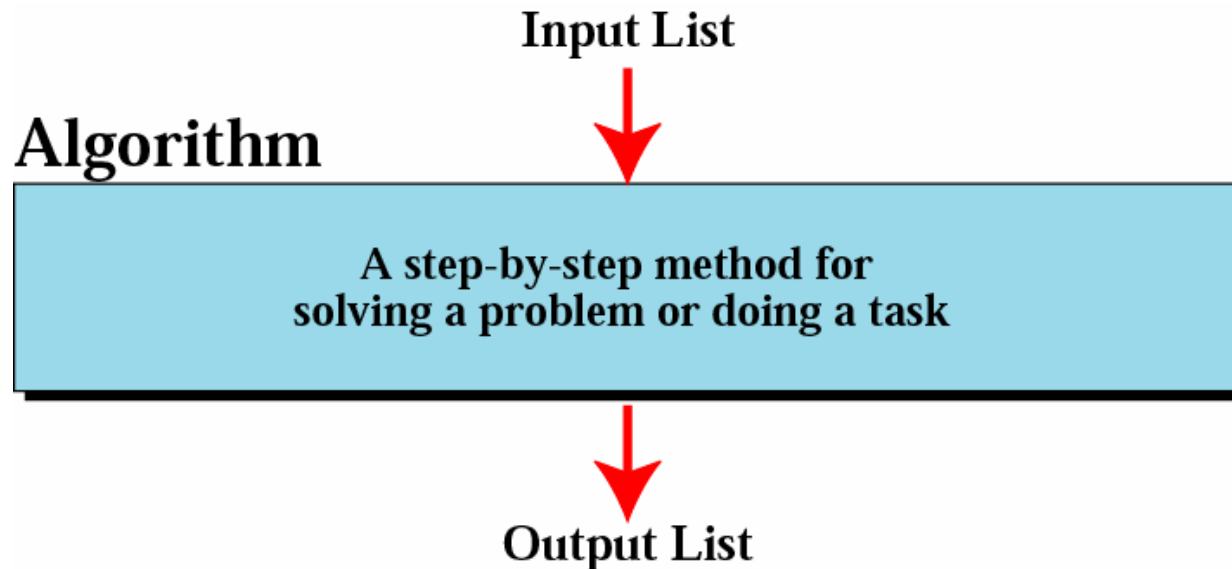

---

**8.1**

***CONCEPT***

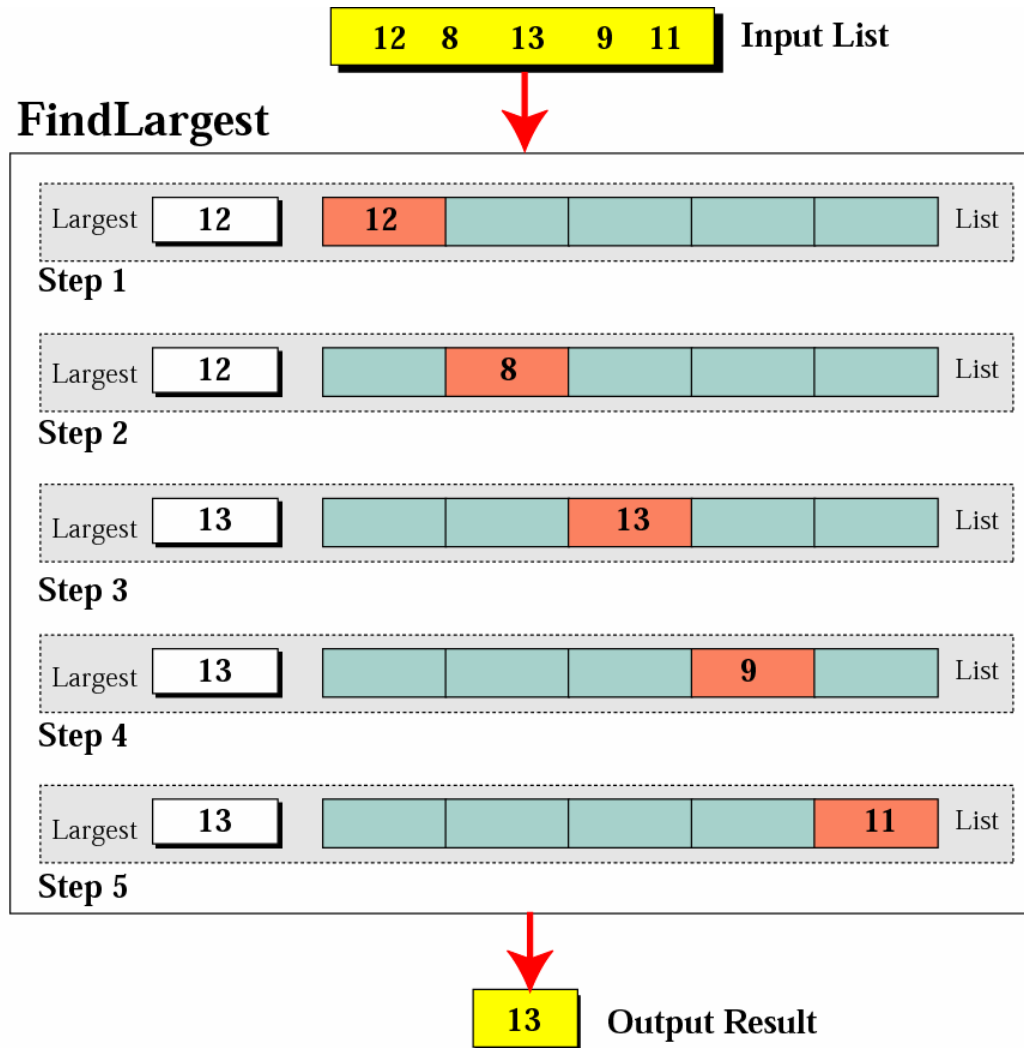

# *Informal definition*

- ❑ Informally, an algorithm is a step-by-step method for solving a problem or doing a task.
- ❑ An algorithm accepts an input list of data and creates an output list of data.

# Example

The algorithm uses the following five steps to find the largest integer.

# Defining actions in FindLargest algorithm

12 8 13 9 11

Input List

**FindLargest**

Set Largest to the first number.

**Step 1**

If the second number is greater than Largest, set Largest to the second number.

**Step 2**

If the third number is greater than Largest, set Largest to the third number.

**Step 3**

If the fourth number is greater than Largest, set Largest to the fourth number.

**Step 4**

If the fifth number is greater than Largest, set Largest to the fifth number.

**Step 5**

13

Output Result

# Refinement

12 8 13 9 11

Input List

## FindLargest

Set Largest to 0.

Step 0

If the current number is greater than Largest, set Largest to the current number.

Step 1

⋮

If the current number is greater than Largest, set Largest to the current number.

Step 5

13

Output Result

# Generalization

Input List

FindLargest

Set Largest to 0.

Repeat the following step  $N$  times:

If the current number is greater than Largest, set Largest to the current number.

Largest

---

**8.2**

***THREE CONSTRUCTS***

# Three constructs

- A **program** is a combination of sequence constructs, decision constructs, and repetition constructs.

```
do action 1  
do action 2  
...  
...  
do action  $n$ 
```

a. Sequence

```
if a condition is true,  
then  
    do a series of actions  
else  
    do another series of actions
```

b. Decision

```
while a condition is true,  
do action 1  
do action 2  
...  
...  
do action  $n$ 
```

c. Repetition

---

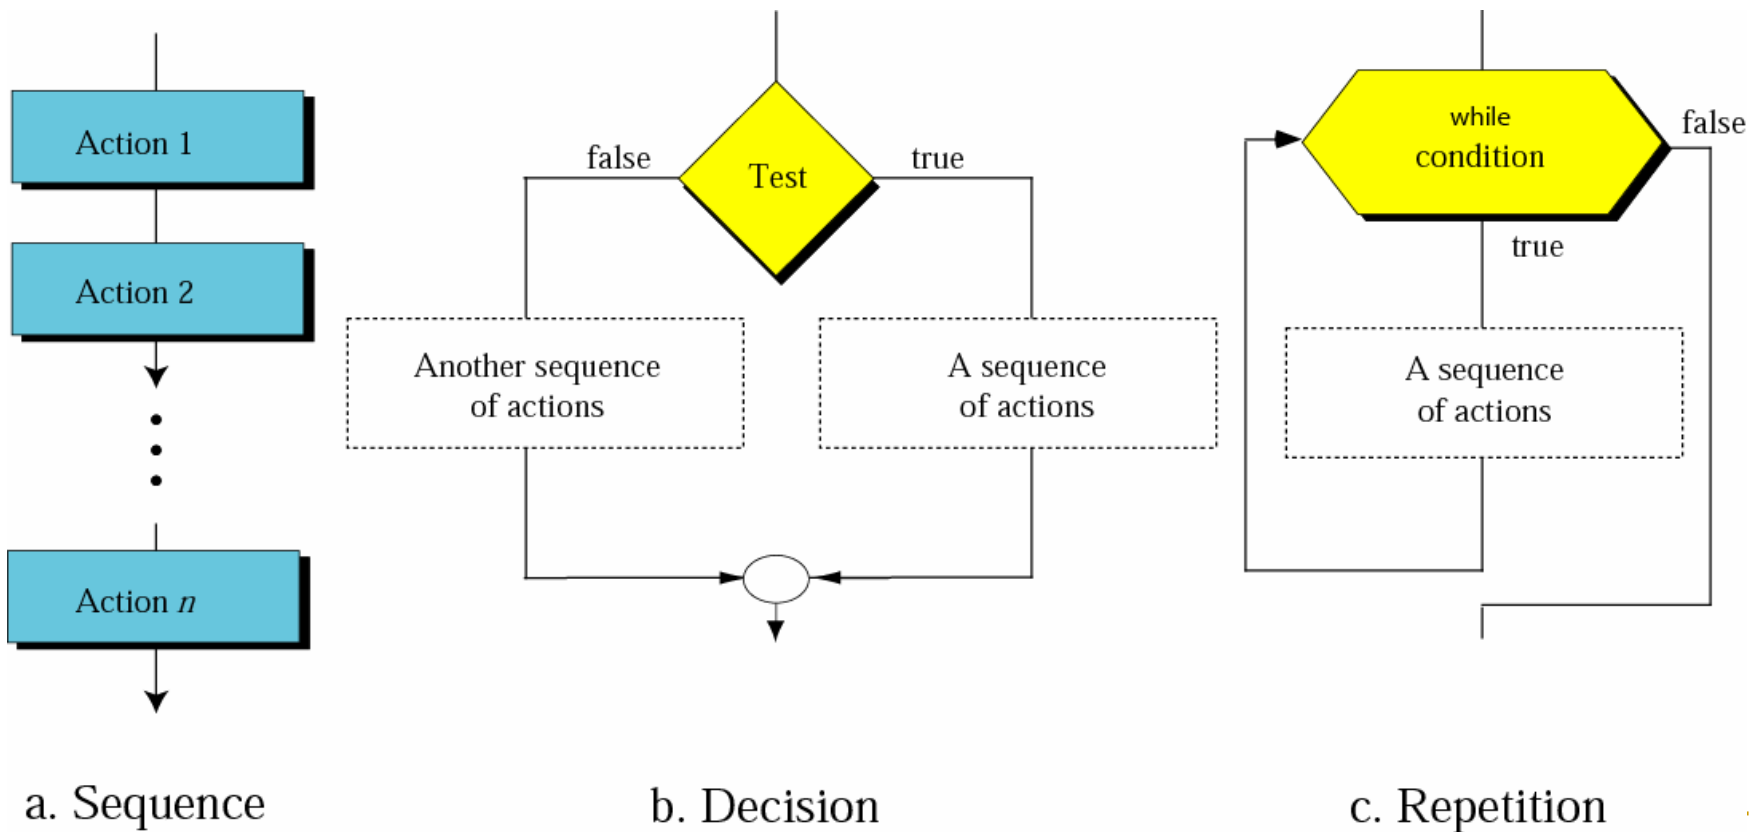

---

**8.3**

***ALGORITHM  
REPRESENTATION***

# Flowcharts for three constructs

- A **flowchart** is a pictorial representation of an algorithm.

# Appendix C: Flowcharts

SYMBOL

NAME

APPLICATION

Terminal

Shows the beginning or end of an algorithm

Flow Lines

Show the action order in an algorithm

Connector

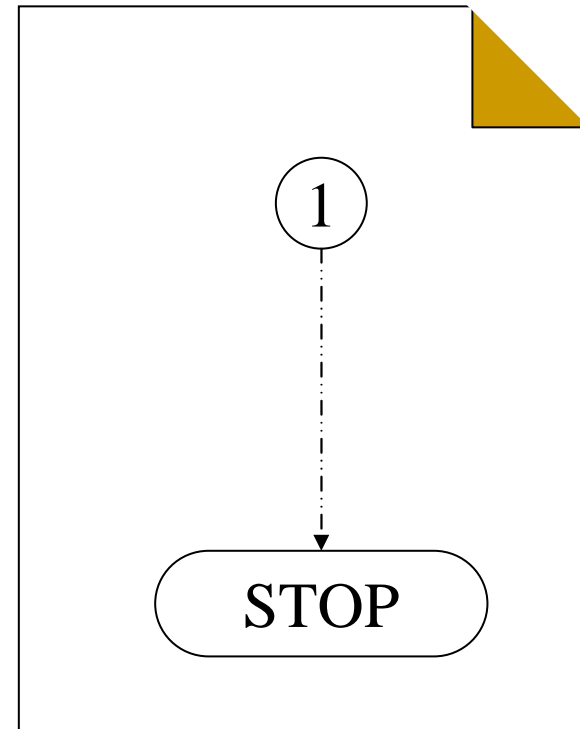

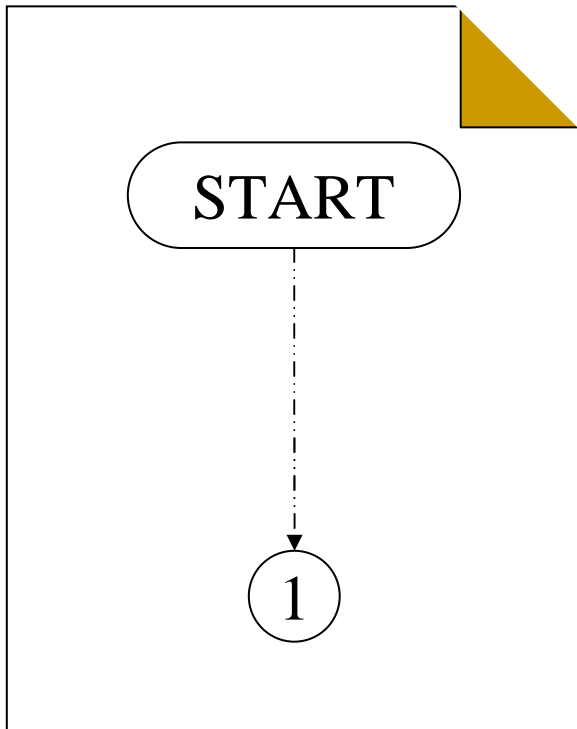

Shows the continuity of the algorithm on the next page

# START and STOP

---

# Connectors

# Sequence Symbols

---

Assignment statement

Input/output statement

Module call

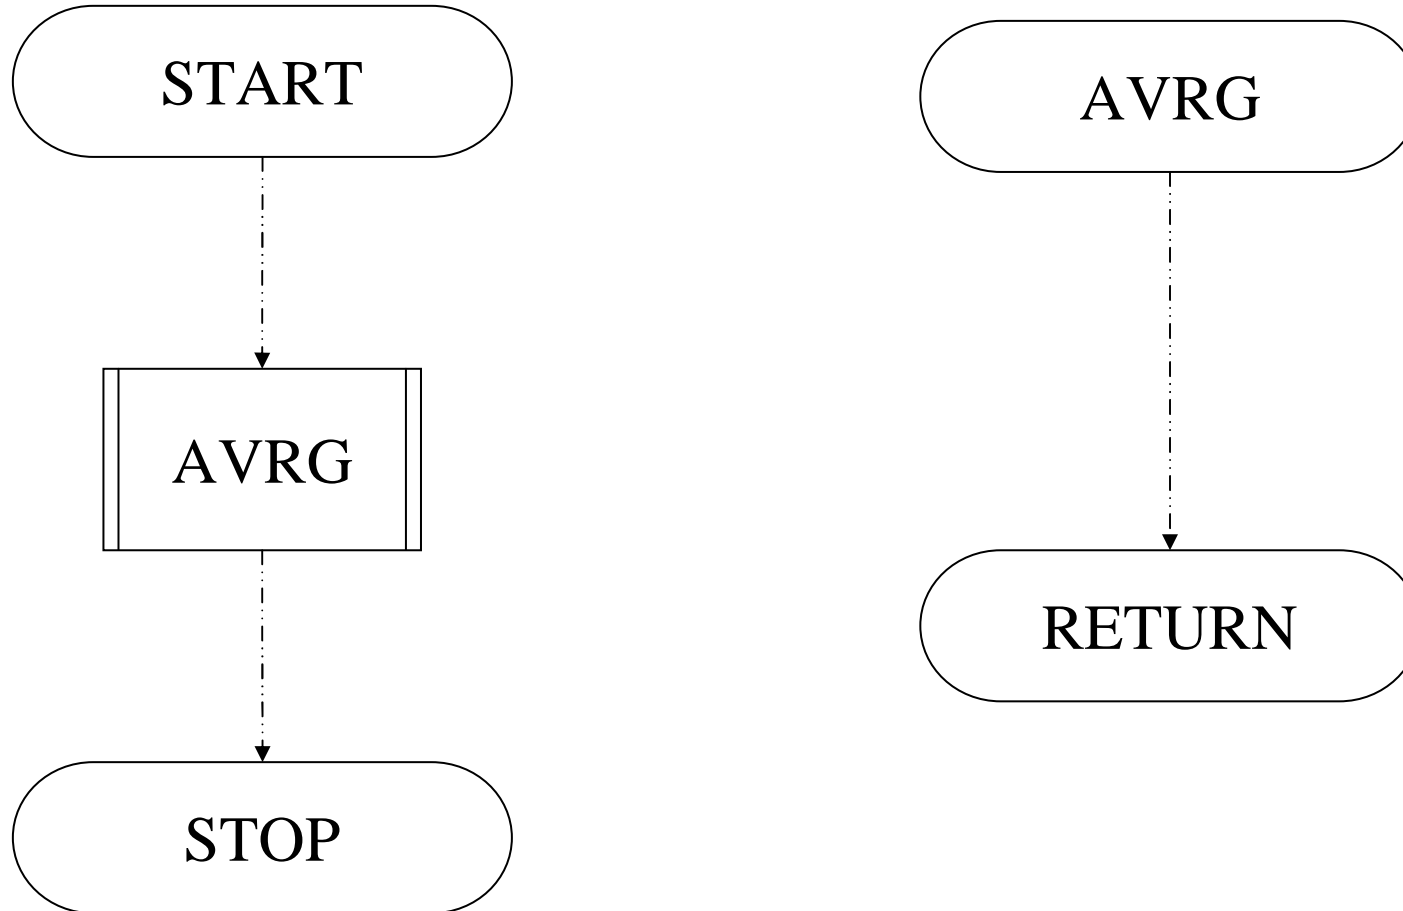

Compound statement

# Assignment statement

variable  $\leftarrow$  expression

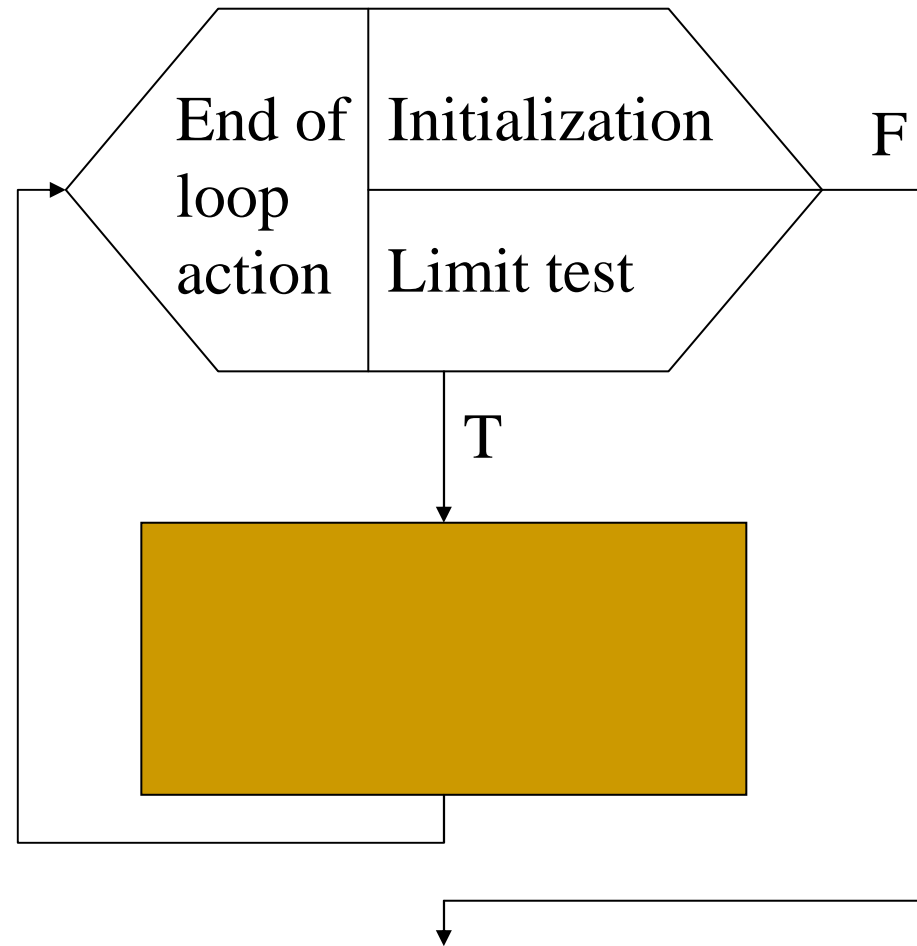

# Module-Call Statement

# Two-Way Selection

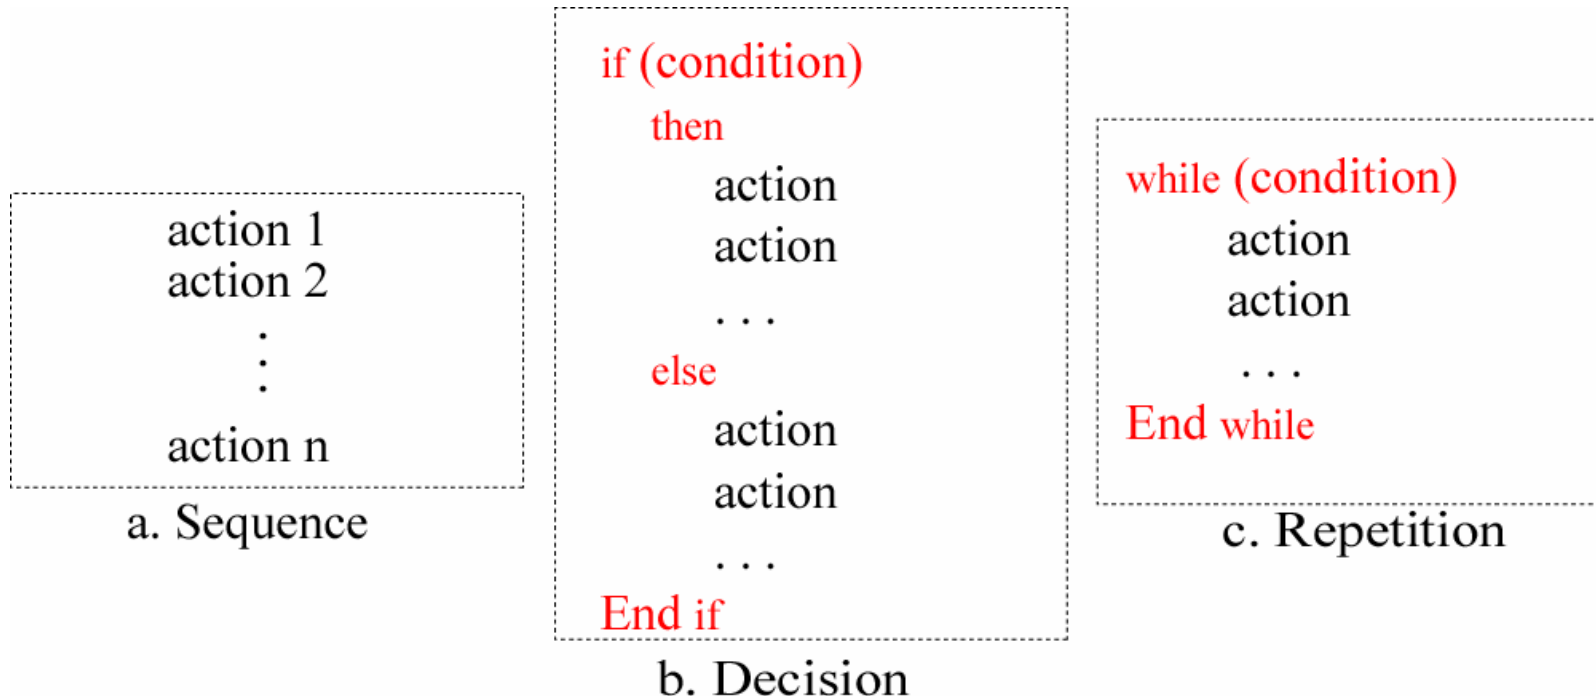

# for Loop

# *Pseudocode for three constructs*

- ❑ **Pseudocode** is an Englishlike representation of an algorithm.

---

## *Example 1*

Write an algorithm in pseudocode that finds the average of two numbers

## *Solution*

See Algorithm 8.1 on the next slide.

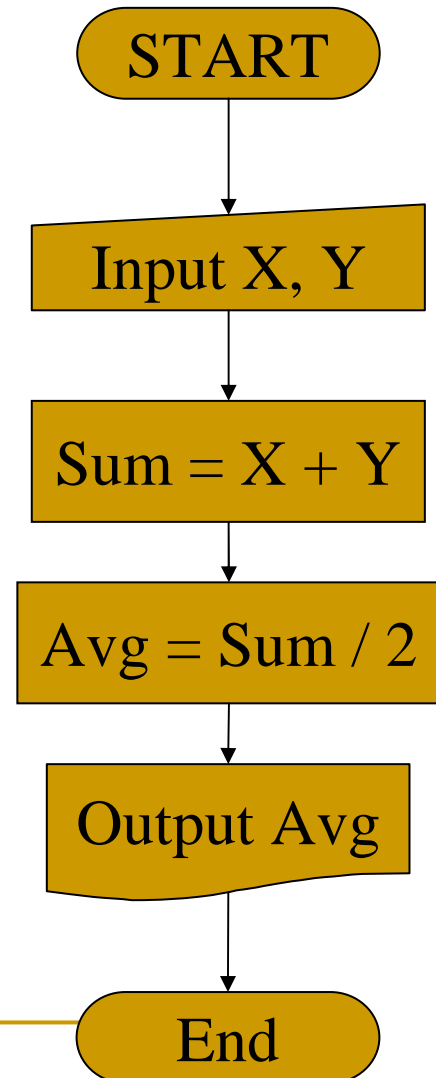

## *Algorithm 8.1: Average of two*

### **AverageOfTwo**

**Input:** Two numbers

- 1. Add the two numbers**
- 2. Divide the result by 2**
- 3. Return the result of Step 2**

**End**

---

## *Example 5*

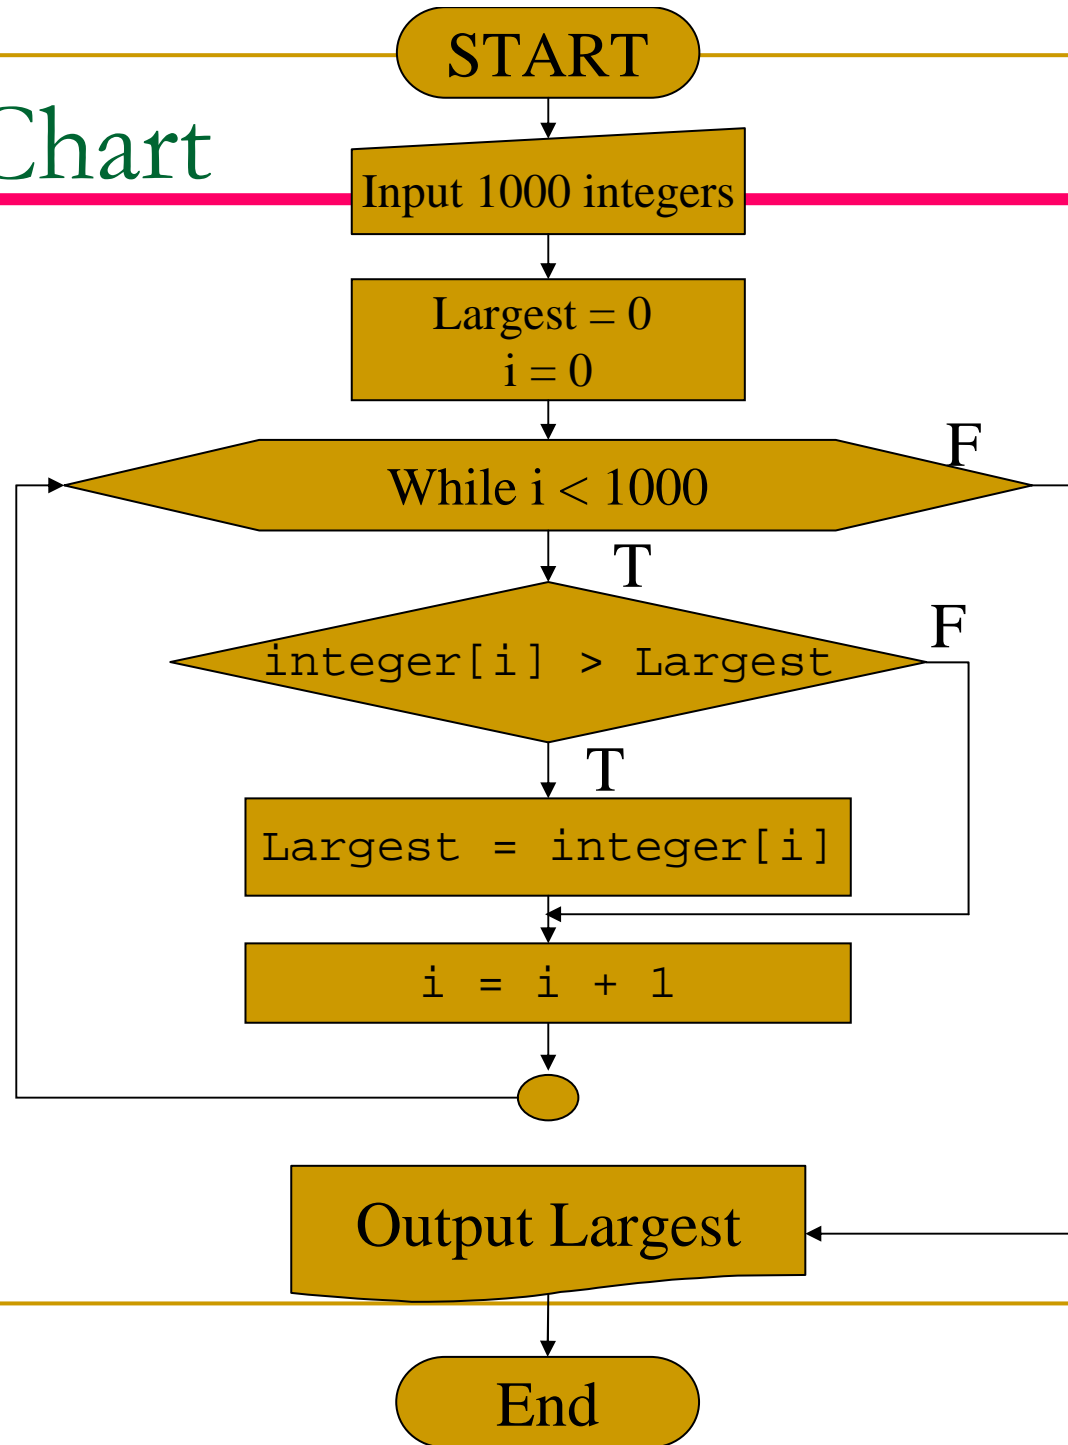

Write an algorithm to find the largest of 1000 numbers.

## *Solution*

See Algorithm 8.5 on the next slides.

# Flow Chart

---

***Algorithm 8.5: Find largest of 1000 numbers***

**FindLargest**

**Input: 1000 positive integers**

- 1. Set Largest to 0**
- 2. Set Counter to 0**
- 3. while (Counter less than 1000)**
  - 3.1 if (the integer is greater than Largest)**  
**then**
    - 3.1.1 Set Largest to the value of the integer**
  - End if**
  - 3.2 Increment Counter**
- End while**
- 4. Return Largest**

**End**

## 8.4

# *MORE FORMAL DEFINITION*

*Formally, an algorithm is an ordered set of unambiguous steps that produces a result and terminates in a finite time.*

---

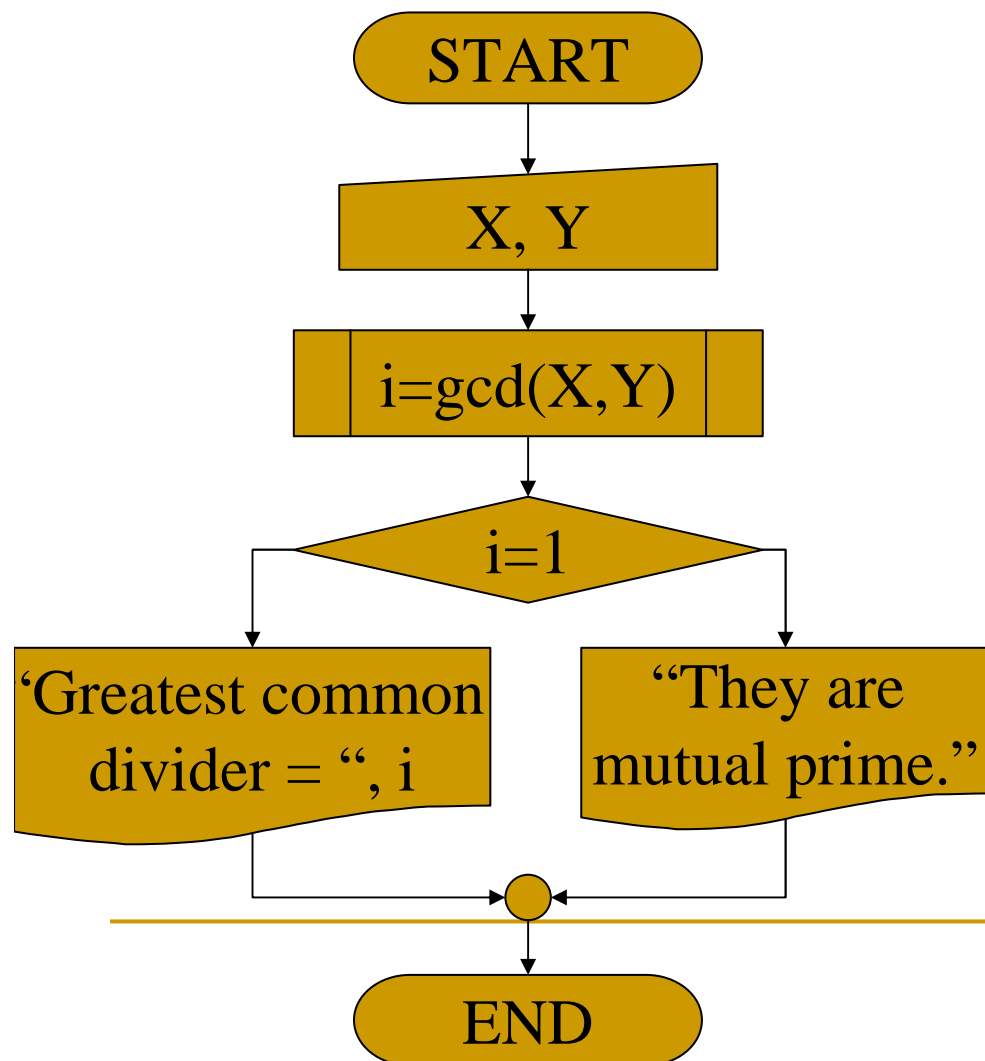

---

**8.5**

***SUBALGORITHMS***

# Concept of a subalgorithm

- An algorithm can be broken into smaller units called **subalgorithms**.

---

**8.6**

***BASIC  
ALGORITHMS***

# Summation

# Bubble sort

# *Example of bubble sort*

Original list

# *Example of bubble sort*

Original list

# *Example of bubble sort*

The smallest number  
is moved to the head.

# *Example of bubble sort*

After pass 1

# *Example of bubble sort*

After pass 1

# *Example of bubble sort*

# *Example of bubble sort*

Original list

After pass 1

After pass 2

# *Example of bubble sort*

After pass 3

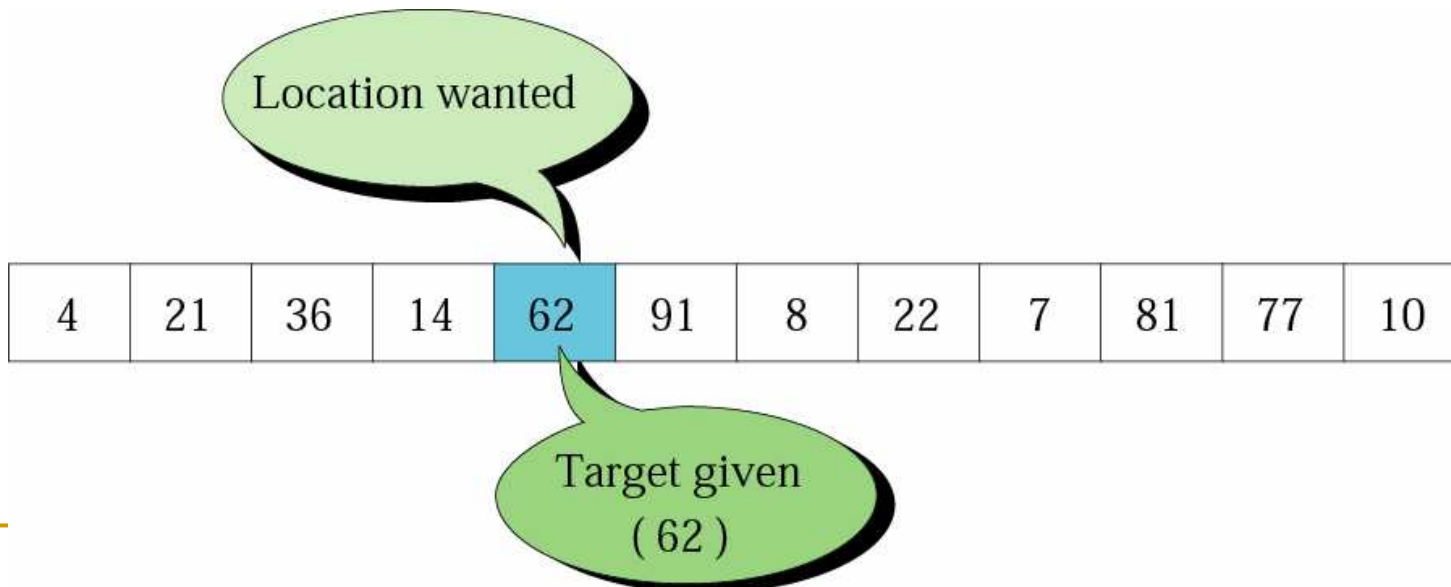

After pass 4  
Sorted

And so on ...

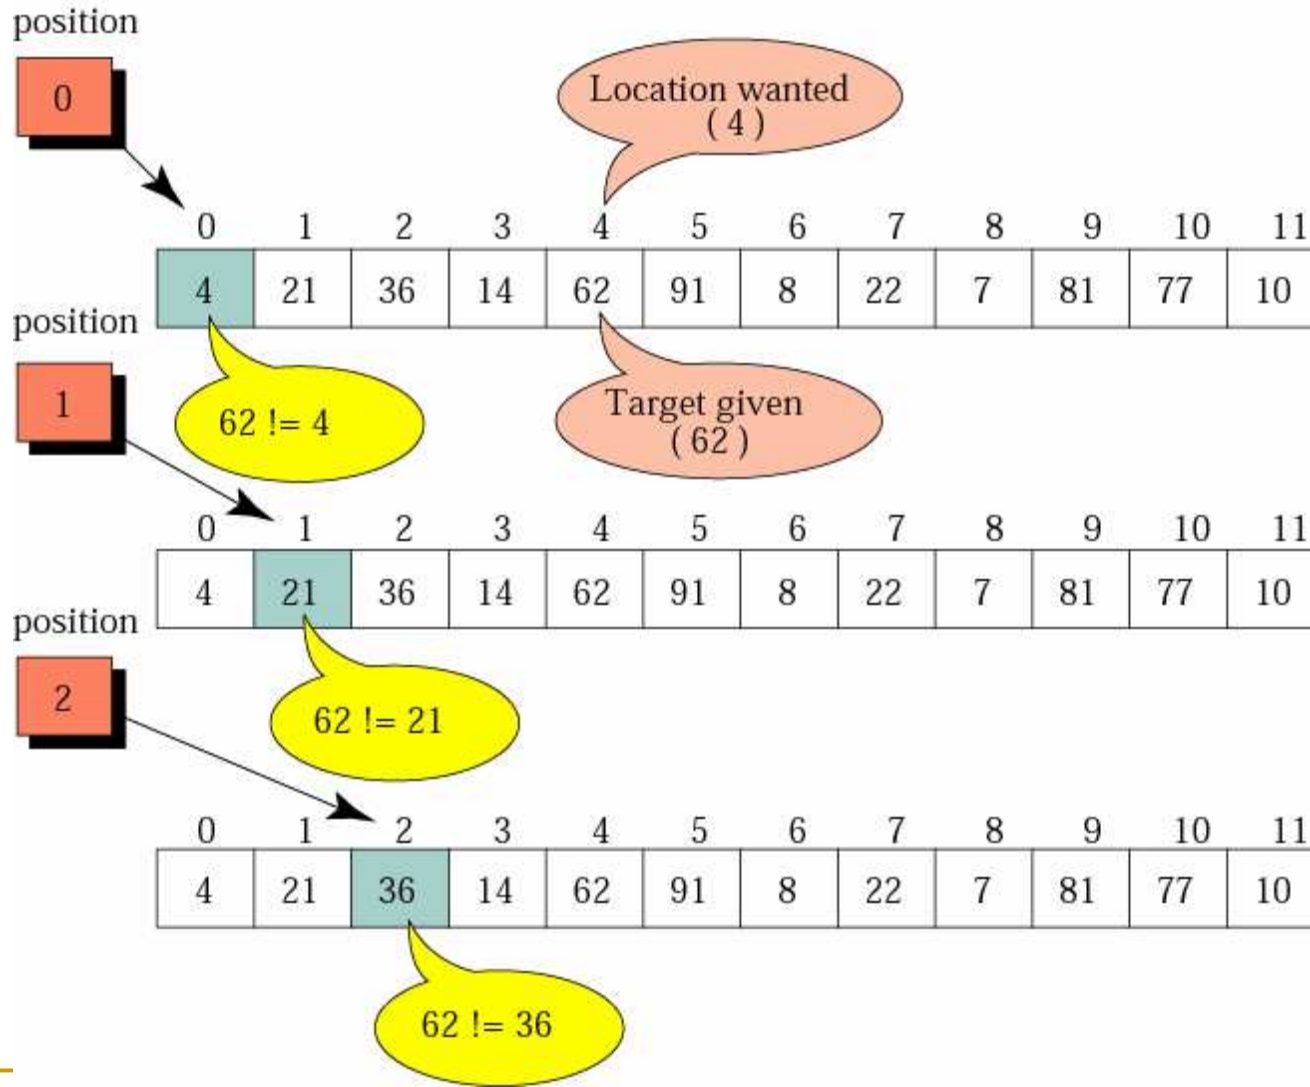

# Search concept

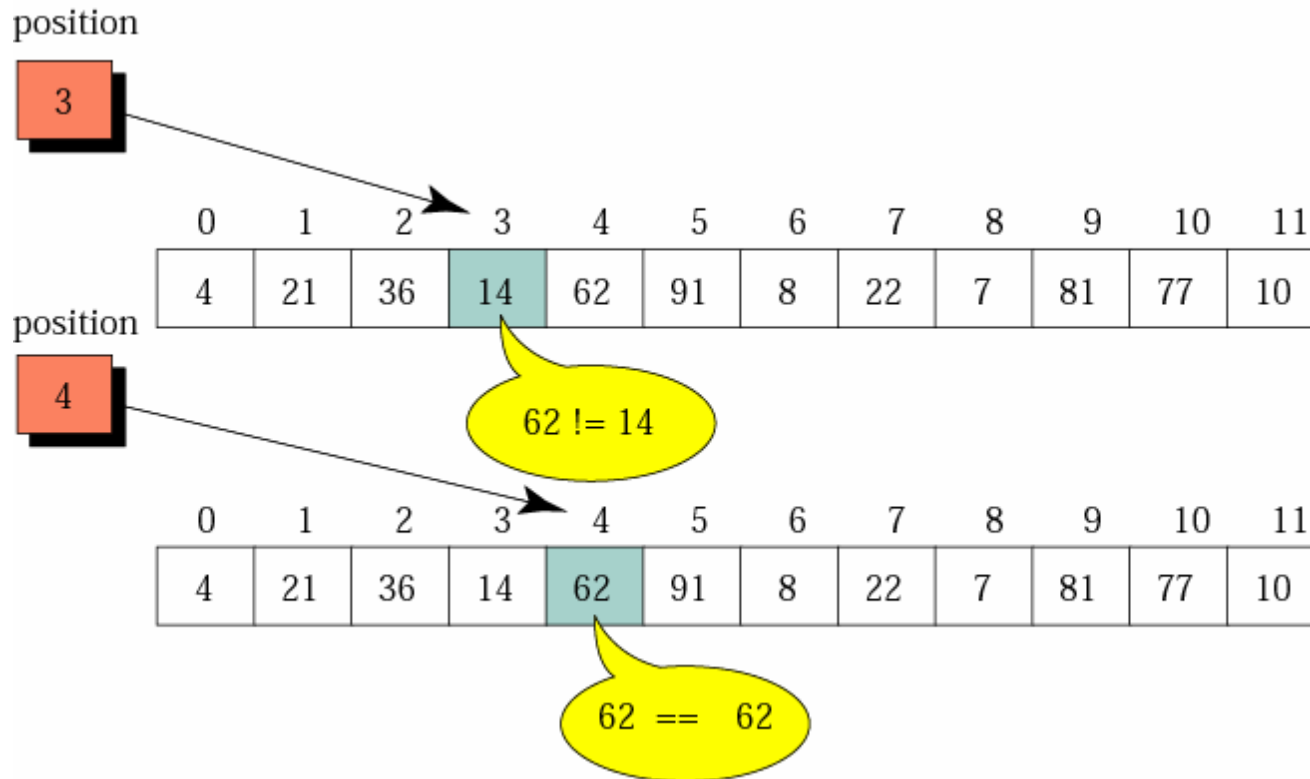

- ❑ **Searching**, a process to locate a target in a list of data, is a basic algorithm.
- ❑ **Sequential search** is used for unordered lists.
- ❑ **Binary search** is used for ordered lists.

# Example of a sequential search

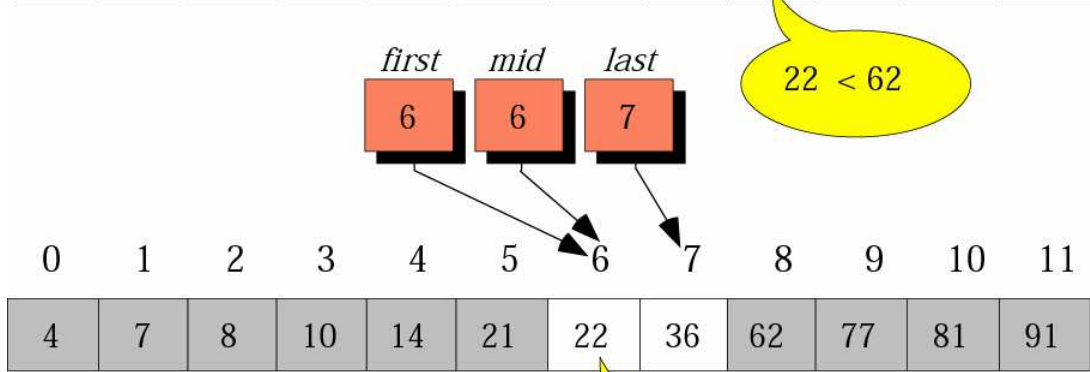

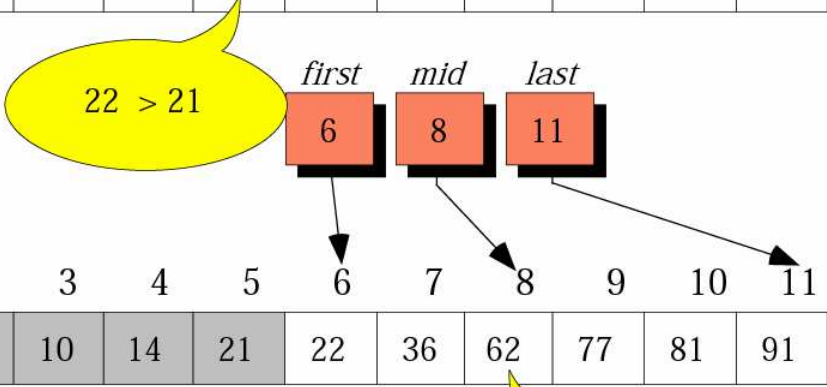

# Example of a sequential search

# Example of

## a binary search

Target: 22

22 == 22

Note:

***The only language understood by a computer is machine language.***

# *Evolution of computer languages*

- ❑ A **symbolic language** uses symbols to represent various machine language instructions. Symbolic languages are also called assembly languages.
- ❑ A **high-level language** is portable from one computer type to another and free the programmer from one computer type to another and frees the programmer from hardware concerns. BASIC, Pascal, Ada, C, C++, and Java are high-level languages.
- ❑ Natural language

## *Program 9.2 Program in symbolic language*

## *Program 9.3 Program in C++ language*

```
1  /* This program reads two integer numbers from the
2     keyboard and prints their product.
3  */
4  #include <iostream.h>
5
6  int main (void)
7  {
8     // Local Declarations
9     int number1;
10    int number2;
11    int result;
12    // Statements
13    cin >> number1;
14    cin >> number2;
15    result = number1 * number2;
16    cout << result;
17    return 0;
18 }
```

**9.2**

***BUILDING  
A  
PROGRAM***

# Building a program

- The steps to building a program include writing, editing, compiling, and linking code.

---

**9.3**

***PROGRAM  
EXECUTION***

# *Program execution*

# Mid-Term Exam

---

- Date: 10/29 (Wednesday)
- Time: 14:10-17:00
  
- Scope: Chapter 1,2,3,4,5,8,9
  
- Close Book
  - You have seen all the English vocabularies in the textbook or the homework, so do not ask the TA to explain the questions.
