

HW11

Speaker : Po-Chou Chen

Date : 2007.12.14

HW11_1

- (From: Exercise 1 on P.230)
- Write a native C++ program that allows an unlimited number of values to be entered and stored in an array allocated in the free store.
- The program should then output the values five to a line followed by the average of the values entered.
- The initial array size should be five elements.
- The program should create a new array with five additional elements when necessary and copy values from the old array to the new.

HW11_1

```
C:\WINDOWS\system32\cmd.exe

HW11_2

- (From: Exercise 2 on P.230)
Repeat the previous exercise but use pointer notation throughout instead of arrays.
